

ANCHOR — does the dial change the sky?

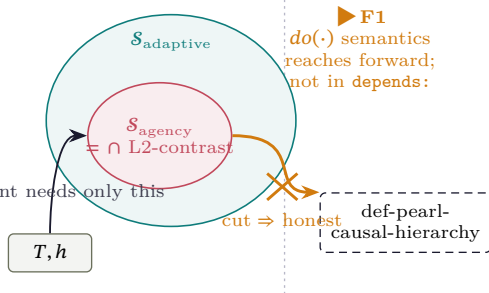

► **F1** content needs only this

SKELETON — scope geometry + F1

Part I

Part II

Turn the dial; if the sky comes out different, that is agency. If it does not, you are only watching (*adaptive*). The dial is physically wired to the Part-I gearbox T — the “Part II” tag on it is a sticker, not the wiring.

Solid = theory’s voice (axiomatic/derived).
 ► **amber** = audit’s voice only. Restate cond (4) in T, h (already in *depends*:) $\Rightarrow$ cut the forward-edge, Part I self-contained, OUTLINE order honest (strengthen-fix). Keep it $\Rightarrow$ OUTLINE is not a topological linearization.
