

ANCHOR — the same adaptive loop at every nesting level

Each box runs the *same* cycle and is well-posed on its own — that is the postulate (the boundary is a choice).

perturb: $\tau_{eq} \uparrow$ at fixed $\tau_{ext} \Rightarrow$ composite breaks (Brooks)

SKELETON — F2: a Ch.1 postulate derived from the end of the book

Dashed = postulate-core (axiomatic — correctly Ch.1, stays). Solid teal = honest dependency / the strengthen-fix relocation. **► amber** = the audit's voice only: a *“*[Derived]”* eq-tag whose cited premises (*#result-contraction-template* = App A; *#form-composition-closure* / *#der-tempo-composition* = Part III) sit ~100 rows downstream and are absent from *depends:* at a *deps-verified* segment — Gate-1 cond-4 fails; the OUTLINE's own “possibly out of place” understates it.
