

ANCHOR — the arrow of time is the primitive cause-arrow

o_t cannot pick a_{t-1} (reverse $\Rightarrow$ loop collapses)

SKELETON — coupling spectrum, the agency|adaptive seam, and F3

*Solid teal = theory's voice / the in-text strengthen-fix; dashed grey = the forbidden reverse-causal arrow; ► **amber** = audit's voice only. The postulate itself (temporal-precedence causality) is textbook-clean — the only defect is the **nominal** label colliding across the agency seam (F3); the postulate is the in-corpora standard F2 should meet.*
