

ANCHOR — a slider has a ceiling the *format* sets

SKELETON — the chapter pipeline + a *legitimate* forward-preview

*Dashed* = previewed-here / derived-later — the legitimate forward-reference (prose preview, no derivation tag). Compare F2: this is exactly how a Ch. *n* segment should point at a downstream result; F2's segment instead carried a "[Derived]" tag for the downstream result. This intro is the in-corpora standard F2 fails.
