

audit reading: consolidation can reorganize what is already active or import from auxiliary memory

internal replay
sampled from M itself
 $I(e_{\text{replay}} \mid M) = 0$

auxiliary memory
buffer, file, chronica store
may be outside active M

active model state
 $M_{\tau-}$

updated state
 $M_{\tau+} = f(M, e)$

zero-new-information replay holds only relative to a complete active state
