

four regimes come from this precedence flow, not the full 2^3 Boolean cube

incoming event
 e_τ^A

$\|e\|_B \leq R_B?$

yes

representable
in $\mathcal{M}_B$?

yes

above
observability?

yes

Regime I
informative update

no

Regime II-a
magnitude shock

no

Regime II-b
structural shock

no

Regime III
ambient erosion

Regime I sign depends on content/alignment

audit watch: convert magnitude, variance, structural floor, and information
to one disturbance-rate unit before summing ρ_B^{eff}
